UNIT PRICE: \$5,393.43

**System Description:** Mesh Cutter is a skin grafting instrument that affords the operating surgeon a means of management for third degree burns and other full thickness defects after the patient's life support systems have become relatively stable and the wounds have been properly debrided and prepared for the skin grafting procedure.

The instrument consists of a ratchet handle continuous feed roller, a cutting roller, and a guidance plateau. The guidance plateau helps ensure a proper alignment of the dermacarrier and cutting rollers, and the ratchet handle facilitates proper advancement of the carrier.
