System Description: The Force 2 electrosurgical unit provides both cutting and coagulation in monopolar and bipolar outputs. Simultaneous independent coagulation permits two surgeons to fulgurate from a single generator. Accessories are activated only when keyed, reducing the potential for injury caused by inadvertent activation. Preset blended cutting modes provide optimum hemostasis during cutting. The Force 2 provides Return Electrode Monitoring (REM) substantially reducing the risk of patient burns at the return electrode site. 300 Watts output in cut mode. Monopolar footswitch included. The Valleylab Force 2 accepts all standard Valleylab accessories to help meet the surgeon's needs, in a wide range of general procedures, and in specialties including gynecology, urology, thoracic, and plastic and reconstructive surgery. Low voltage coagulation ensures controlled desiccation with less destruction of peripheral tissue, making the Force 2 generator ideal for laparoscopic procedures.
