System Description: This slim insertion tube diameter allows for ease of introduction, minimizing patient discomfort. 2.2mm instrument channel provides effective aspiration and smooth passage of accessories. The state-of-the-art technology has succeeded in increasing the number of image fibers by 40%. In addition, enlargement of the image size by 10% allows larger, brighter, and more crisp images to be obtained. Together with the wide angle of 120%, these modifications dramatically improve the observation performance, and greatly reduce fatigue of the eyes.
