System Description: IDEXX Colilert reagent is used around the world for the detection of coliforms and *E.coli* in water. Colilert, with its patented Defined Substrate Technology® (DST®), is used in over 90% of all US State labs. Colilert is, in fact, used more than all other methods combined (US, Canada and Japan drinking water markets). Colilert is US EPA-approved and is included in [Standard Methods for Examination of Water and Wastewater](#). (click to follow link) Reagent is packaged in plastic snap-packs with perforations for tearing to remove powdered reagent. Each packet is added to 100ml water sample and incubated for 24 hours to determine the presence or absence of coliform in drinking water.

Features:

- Sample size: 100ml
- Time to results: 24 hours
- Shelf life: up to 12 months at 35-86° F
- Read: Yellow when coliforms are present and fluoresces with *E.coli*
