USAMMA POC: Customer Relations Management 301-619-1288/4301 - DSN 343-1288/4301

UNIT PRICE: \$103.24

System Description: The Leg Brace is designed to provide functional management of stress fractures and the graduated management of certain stable fractures of the lower leg.

- Features:**
- Semi-rigid, anatomically designed shells stabilize and protect the leg
 - Patented Duplex aircell system enhances circulation and reduces swelling
 - Pre-Inflated aircells allow easy application
 - Transfer of weight-bearing load reduces causative forces of injury
 - Easy fit in shoes for early protected weight-bearing

UAs: 500A, N312

USAMMA POC: Customer Relations Management 301-619-1288/4301 - DSN 343-1288/4301

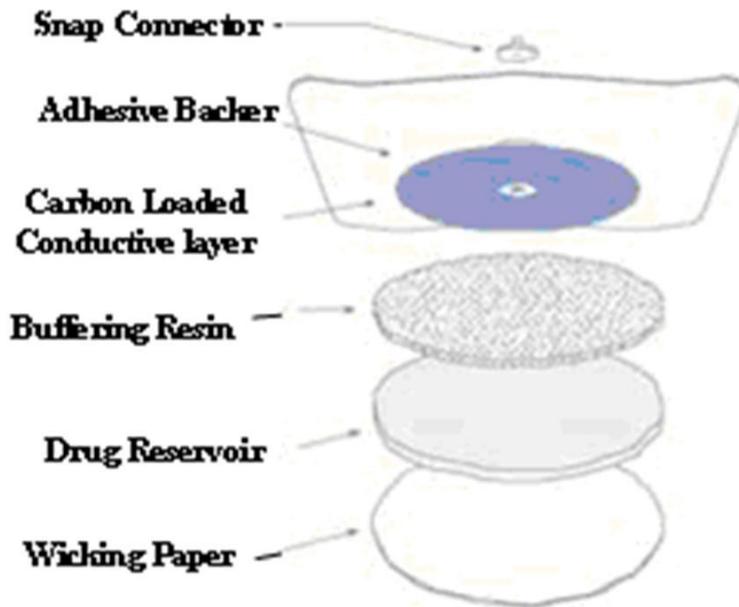

UNIT PRICE: \$1,486.00

System Description: The Empi Dupel iontophoresis system provides health care professionals with an alternative to injections for administering drugs. The easy-to-use system has contributed to the growth in the use of iontophoresis for physical rehabilitation. Iontophoresis is a method of delivering medications through the intact skin. It uses an electrical field to accelerate drug ions into a focal region under the skin. Like charges repel; opposite charges attract. A negative current applied over an electrode containing a negatively charged medication will repel the drug ion through the skin. If performed with effective voltage levels, iontophoresis delivers 10 times more drug than passive diffusion.

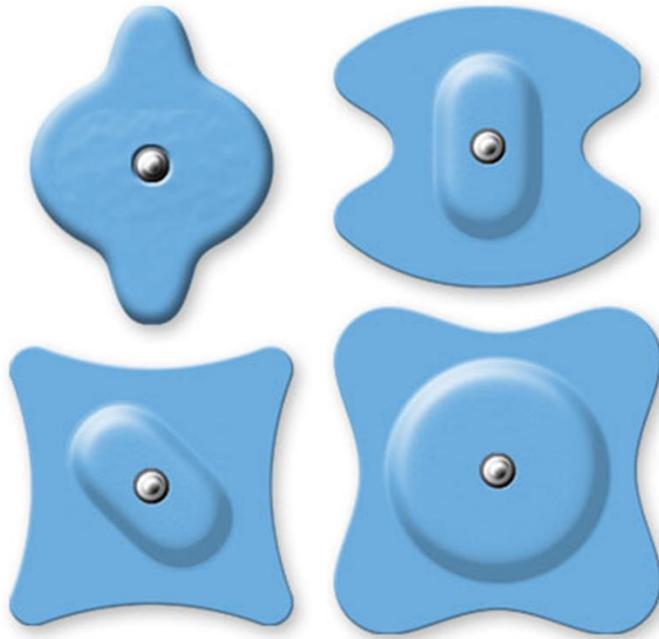

- Features:**
- High efficiency, bi-layer design for optimal drug delivery
 - Patented ion-exchange buffering system ensures that pH shifts occurring during iontophoresis are controlled.
 - Four shapes/sizes for best adhesion, conformability, and coverage
 - Allows application of higher dosages – tested to 160 mAmin (milliamp minutes)
 - Two-channel operation allows the clinician to treat multiple patients, two sites, or to cover a large area
 - Fast, easy-to-fill treatment pad
 - Foam drug reservoir minimizes leaking
 - Latex Free
 - Adhesive tape with tabbed design enhances application and conformability

USAMMA POC: Customer Relations Management 301-619-1288/4301 - DSN 343-1288/4301

UNIT PRICE: \$446.83

System Description: Inspired by the most rigorous demands of our elite military medical groups, this medical bag system is durable and flexible, suitable for use by military, paramedics, field medics, smoke jumpers, search and rescue units, and anyone with a need for a really tough bag. The system is modular, with internal components which are removable and transferable. The Sked-Pak™ I is a heavy-duty backpack designed to use the standard Military ALICE (All-Purpose Lightweight Individual Carrying Equipment) pack frame and specifically for use in parachute jumps. It comes complete with an integral single point release mechanism and leg straps necessary for jumping safely. The internal components can be removed as a unit for re-supply, or transferred quickly from bag to bag. A second removable insert can be purchased to enable instant resupply. All components can be ordered separately, for replacement of lost parts or to keep kits pre-packed, ready for rapid replacement in a field environment. All internal components are black.

Features: The Sked-Pak™ I Jumpable Medical Ruck includes:

- Sewn-on single-point release and removable leg straps for use by parachutists
 - Eliminates the need for the traditional "H" harness
 - When released, the pack drops on a lowering line for personnel safety on landing
- Outer storage pockets, two canteen pockets, and a removable accessory pack
 - Optional accessory pack can be purchased to increase storage capacity
- Compression straps, leg straps, and release mechanism with each bag
 - Compression straps prevent loss of equipment should the zipper burst on impact
- Coil zippers -- used throughout the bag
 - Allows sliders to be pulled back over a popped zipper, making it as good as new

- Does not include pack frame or canteens; a CamelBak® can replace the 2 canteens

Military personnel and other jumpers are encouraged to contact Skedco for complete information regarding parachute jumping provisions of the bag.

UNIT PRICE: \$495.00

System Description: The Cervical Traction device is the first home traction device specifically designed to deliver up to 50 pounds of force. It provides unparalleled traction therapy and is an alternative to long-term clinical care and, for some, an alternative to surgery. Cervical traction is delivered in the supine position and the angle is adjustable from 15 to 25 degrees. The features allow true replication of clinical treatments - comfort, angle and force of home treatments are identical to what patients would receive in the clinic.

- Features:**
- Pulls from the back of the head to protect the temporomandibular joint (TMJ)
 - Applies up to 50 pounds of traction with patented handheld pump and easy-to-read gauge
 - Ensures safety -- user has total control of force at all times
 - Blow-off valve limits the amount of force that can be applied
 - Allows control of the traction angle from 15 to 25 degrees
 - Includes patented self-adjusting neck wedges for a perfect fit
 - Added comfort
 - Easy to use
 - Has a built-in angle adjustment
 - Does not require assembly
 - Is easily portable in a carrying case
