

INFORMATION PAPER

MCMR-MMO-SF
15 October 2010

Subject: Medical Stand Alone Set, T412

1. Purpose: To describe T412 UA
2. Facts:
 - a. USAMMA assigns a unique identifier for every medical equipment set issued to customers. This code is a BDN/ACN that is maintained in the USAMMA wholesale system, TEWLS, and should be recorded on accountable property records (PBUSE or appropriate property accountability system) as the serial number.
 - b. Components from USAMMA are grouped into UA sets with a unique BDN/ACN identifier. Components cannot be issued and tracked without a UA code.
 - c. Units that have an MTOE requirement for equipment that is not designated to go into a specific medical set are issued equipment with the T412 UA. The T412, a Medical Stand alone set, allows USAMMA to issue LIN equipment that can be tracked in TEWLS. As no unit has a MTOE requirement for a T412, units receiving a T412 UA should not account for the UA on property records. However, the gaining unit should account for the LIN equipment contained in the T412 on property records individually.
