**UNIT PRICE: \$4,461.71**

**System Description:** Mesh Cutter is a skin grafting instrument that affords the operating surgeon a means of management for third degree burns and other full thickness defects after the patient's life support systems have become relatively stable and the wounds have been properly debrided and prepared for the skin grafting procedure.

The instrument consists of a ratchet handle continuous feed roller, a cutting roller, and a guidance plateau. The guidance plateau helps ensure a proper alignment of the dermacarrier and cutting rollers, and the ratchet handle facilitates proper advancement of the carrier.

**Features:** Efficient

- Interchangeable cutters provide for true efficiency
- Four common expansion ratios help to provide patient specific results by promoting proper wound drainage and epithelialization for proper healing
- Intraoperative efficiencies are realized without the inconvenience of multiple machines

Durable

- Convenient hinge design allows the cutters to be changed quickly or removed for easier use and cleaning
- Built-in comb minimizes the chances of grafts sticking to and wrapping around the cutters
- Stainless steel case makes sterilization and transportation simple
- Lubeless gears help ensure a smooth performance, time after time

**NOTE: All orders are to be placed through Alliance Joint Venture. Part numbers for resupply used by the distributor on ECAT contract differ from those in the manufacturer's original set.**
