**UAs: N437**

**USAMMA POC: Customer Relationship Management 301-619-1288/4301 - DSN 343-1288/4301**

**UNIT PRICE: \$28,000.00**

**System Description:** This system was designed to simplify the delivery of renal care in acute settings. It gives clinicians the flexibility to deliver the more intensive renal therapies they believe will help their patients, while reducing the strain on overburdened critical care staff and resources. Making treatment simple.

The unit was designed from the ground up to combine treatment flexibility with surprising simplicity.

**Features:**

Perform the therapies your patients need

- High blood flow rates are well suited for more intensive therapy delivery.
- Deliver a choice of therapies—including high-dose, continuous hemofiltration or hemodialysis (CVVH, CVVHD), and extended daily therapies.
- Absence of blood/air interface in cartridge is designed to optimize blood flow and reduce clotting.

No scales or waste bags

- Volumetric balancing eliminates scale nuisances, which reduces interventions and nursing workload.
- No effluent collection is needed—the system drains to an open line.
- No water treatment is needed.

Reduce staff workload

- No waste bags to empty, which frees nurses to focus on patients.
- Portable with no special electrical or plumbing needs, the therapy can be taken to the patient.
- The drop-in, single-use cartridge performs multiple therapies, and offers automatic engagement of all safety systems upon loading.
- OneView interface offers simple controls, on-demand help and charting, which simplifies training and use.
