UNIT PRICE: \$187.85

System Description: The purpose of a tag line is to prevent dangerous litter spin that occurs when hoisting a litter by helicopter. This kit is designed to prevent spin while preventing other problems normally associated with tag lines, such as tangled rope, deployment difficulties, and storage problems.

Features: The Skedco Helitag Kit contains 250 feet of 7 mm water rescue rope. It has a polypropylene core with a nylon sheath which allows it to float in the water and have good abrasion resistance. Both ends have a figure 8 knot on the end of the rope that is backed up with a double overhand knot for safety.

Recommended Personnel Placement for Helicopter Hoisting of a Stretcher

Preferred Placement

Ideal placement. Use of two tag lines is the safest way to prevent any litter from spinning. Two tag lines should always be used in training and non hostile situations for best litter control. Maximum visibility for pilot and crew.

Good Placement

Good placement to prevent stretcher spin with minimum tension applied to tag line. Maximum visibility for pilot and ground crew.

Improper Placement

While better than no tag line at all, this placement of personnel and equipment tilts the stretcher, increasing the likelihood of spin, and requires greater tension on the tag line to prevent the spin, creating an increased possibility of weak link separation.

WARNING! A NEW WEAK LINK MUST BE USED EACH TIME A HUMAN LOAD IS HOISTED!
