**System Description:** IDEXX Colilert reagent is used around the world for the detection of coliforms and E.coli in water. Colilert, with its patented Defined Substrate Technology® (DST®), is used in over 90% of all U.S. state labs. Colilert is, in fact, used more than all other methods combined (United States, Canada, and Japan drinking water markets). Colilert is U.S. EPA-approved and is included in Standard Methods for Examination of Water and Wastewater (link to Standard Methods Sheet provided on links page). Reagent is packaged in plastic snap-packs with perforations for tearing to remove powdered reagent. Each packet is added to a 100 mL water sample and incubated for 24 hours to determine the presence or absence of coliform in drinking water.

**Features:**

- Sample size: 100 mL
- Time to results: 24 hours
- Shelf life: up to 12 months at 35-86 °F
- Read: Yellow when coliforms are present and fluoresces with E.coli

**NOTE: USED WITH INCUBATOR IN WATER TEST KIT BACTERIDOD-C-66, 6665-00-682-4765.**
